Recommended Filter Circuit

All the AM2LW-Z Series have been tested with the above recommended test circuit. This series should be tested under load.

If it is necessary to further decrease the input/output ripple, the value of the filter capacitor can be increased; a capacitor with a low ESR should be used. Excessive filter capacitance can cause start up problems with the converter.

In general, the recommended capacitance values are:

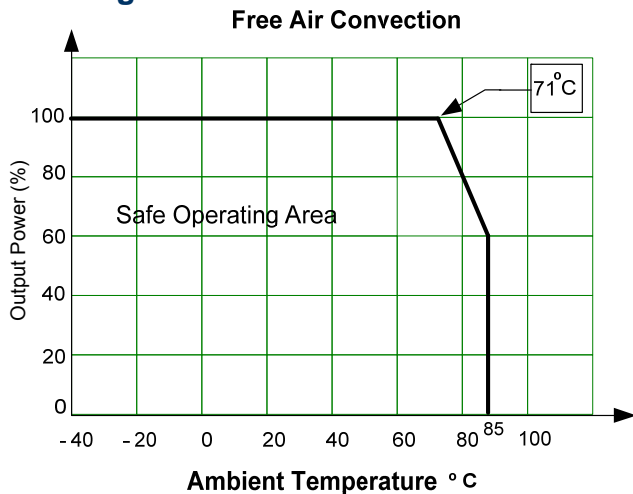

Cin: 10 μ F~47 μ F
Cout: 10 μ F/100mA

Refer to table below for maximum capacitor values:

External Capacitor Value

Single Output Vout (VDC)	Cout (μ F)	Dual Output Vout (VDC)	Cout (μ F)
5	1000	± 5	± 680
12	470	± 12	± 330
15	330	± 15	± 220
