

B-XLS-1W.5.6 Series

Isolated 1W Single Output SIP7 DC/DC Converters

FEATURES

- ◆RoHS compliant
- ◆I/O isolation voltage 1000VDC
- ◆Operating Temperature: -40°C~ + 85°C
- ♦High efficiency up to 81%
- ◆Fully encapsulated toroidal magnetics
- ◆Internal SMD construction
- ◆Power density up to 0.85W/cm³
- ◆No electrolytic or tantalum capacitors
- ♦5V、12V&15V output
- ◆No heat sink required
- ◆Dual output from a single input rail
- ♦UL 94V-0 package material
- ◆No external components required
- Industry standard pin out
- ◆Power sharing on output
- ♦MTTF up to 3.4 million hours

MODEL SELECTION B⁰05⁰05⁸X⁴LS⁵-1W⁸.5.6⁷

- 1) Product Series
- 2 Input Voltage
- 3 Output Voltage
- **4** Fixed Input
- ⑤Package Style
- **®Rated Power**
- **7Output 5&6 PIN**

APPLICATIONS

The B-XLS-1W.5.6 series of industrial temperature range DC/DC converters are the standard building blocks for on-board distributed power systems. They are ideally suited for providing single rail supplies on primarily digital boards with the added benefit of galvanic isolation to reduce switching noise. Surface mount technology and advanced packaging materials produce rugged reliable performance over an extended temperature range from -40°C to+85°C.

| SELECTION GUIDE | | | | | | | | |
|-----------------|-------------------------|--------------------------|---------------------------|---------------------------------------|-------------------|----------------------------------|-----------------------------|--|
| Order code | Input Voltage (V) | Output Voltage (V) | Output Current (MA) | Input Current (Rated Load) (MA) | Efficiency (%) | Isolation Capacitance (PF) | MTTF ¹ (KHRS) | |

| Case temperature above ambient | All other output types | | 28 | | |

Technical notes

ISOLATION VOLTAGE

"Hi Pot Test", "Flash Tested", "Withstand Voltage", "Dielectric Withstand Voltage"&" Isolation Test Voltage" are all terms that relate to the same thing, a test voltage. Applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation. Professional Power Module B XLS series of DC/DC converters are all 100% oroduction tested at their stated isolation voltage. This is 1KVDC for 1 second.

A question commonly asked is, "What is the continuous voltage that can be applied across the part in normal operation?"

For a part holding no specific agency approvals, such as the B_XLS series ,both input and output should normally be maintained within SELV limits i.e. less than 42.4V peak, or 60VDC. The isolation test voltage represents a measure of immunity to transient voltages and the part should never be used as an element of a safety isolation system. The part could be expected to function correctly with several hundred volts offset applied continuously across the isolation barrier, but then the circuitry on both sides of the barrier must be regarded as operating at an unsafe voltage and further isolation/insulation systems must form a barrier between these circuits and any user-acssible circuitry according to safety standard requirements.

REPEATED HIGH-VOLTAGE ISOLATION TESTING

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials. Construction and environment. The B_XLS series has toroidal isolation transformers, with no additional insulation between primary and secondary windings of enameled wire. While parts can be expected to withstand several times the stated test voltage, the isolation capability does depend on the wire insulation. Any material, including this enamel (typically polyurethane) is susceptible to eventual chemical degradation when subject to very high applied voltages thus implying that the number of tests should be strictly limited. We therefore strongly advise against repeated high voltage isolation testing. but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

This consideration equally applies to agency recognized parts for better than functional isolation where the wire enamel insulation is always supplemented by a further insulation system of physical spacing or barriers.

OUTPUT RIPPLE REDUCTION

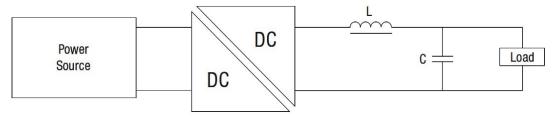

Output ripple reduction

By using the values of inductance and capacitance stated, the output ripple at the rated load is lowered to 5mV p-p max.

Component selection

Capacitor: Ceramic chip capacitors are recommended. It is required that the ESR(Equivalent Series Resistance) should be as low as possible.X7R types are recommended. The voltage rating should be at least twice (except for 15V output), the rated output voltage of the DC/DC converter.

Inductor: The rated current of the inductor should not be less than of the output of the DC/DC converter. At the rated current, the DC resistance of the inductor should be such that the voltage drop across the inductor is <2% of the rated voltage of the DC/DC converter. The SRF(Self Resonant Frequency) should be >20MHz.

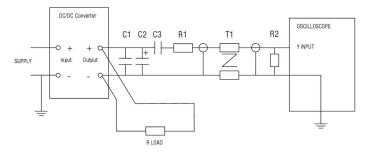

CHARACTERISATION TEST METHODS

Ripple & Noise Characterization Method

Ripple and noise measurements are performed with the following test configuration.

| C1 | 1 μ F X7R multilayer ceramic capacitor, voltage rating to be a minimum of 3 times the output voltage of the DC/DC converter | | |
|--|--|--|--|
| C2 | 10 μ F tantalum capacitor, voltage rating to be a minimum of 1.5 times the output voltage of the DC/DC converter with an ESR of less than 100m Ω at 100 KHz | | |
| C3 | 100nF multilayer ceramic capacitor, general purpose | | |
| R1 | 450 Ω resistor, carbon film, \pm 1% tolerance | | |
| R2 | 50 Ω BNC termination | | |
| T1 | 3T of the coax cable through a ferrite toroid | | |
| RLOAD | Resistive load to the maximum power rating of the DC/DC converter. Connections should be made via twisted wires | | |
| Measured values are multiplied by 10 to obtain the specified values. | | | |

RoHS COMPLIANT INFORMATION

This series is compatible with RoHS soldering systems with a peak wave solder temperature of 300°C for 10 seconds. The pin termination finish on the SIP package type is Tin Plate, Hot Dipped over Matte Tin with Nickel Preplate. The DIP types are Matte Tin over Nickel Preplate. Both types in this series are backward compatible with Sn/Pb soldering systems.

REACH COMPLIANT INFORMATION

This series has proven that this product does not contain harmful chemicals, it also has harmful chemical substances through the registration, inspection and approval.
